

When the Earth rumbles

Soumis par Anne Lejeune le lun, 18/05/2015 - 16:45

When the Earth rumbles is a teaching guide produced by *La main à la pâte*.

It was translated from the original book *Quand la Terre gronde* published in France in 2012. The *La main à la pâte* foundation thanks the International Science, Technology and Innovation Centre for South-South Cooperation (ISTIC) for their translation.

When the Earth rumbles offers to primary and lower secondary school teachers a complete program for studying natural disasters, particularly volcanoes, earthquakes and tsunamis, with the aim of helping children around the world to study, understand, and self-guard from natural hazards.

The core of the module consists of 4 sequences, each developed in a number of sessions:

- Sequence 1: Volcanoes
- Sequence 2: Earthquakes
- Sequence 3: Tsunamis
- Sequence 4: My county in the face of risks

Please consider that this project was originally designed for French classes, so it includes global references but also some local French-contextualized references about earthquakes and volcanoes. These are examples and teachers are encouraged to adapt the corresponding sessions to the context of their country.

You can download the PDF [here](#) or order some paper copies from [ISTIC](#)
